Step 1:Prepare the grommet

Apply a drop of dish soap to facilitate plug movement

Step 2:Dismantle the car's panel

- · Remove the panel to access the connector
- Disconnect the connector from the vehicle, noting the connectors' appereance may differ

Step 3:Remove the drives

- Support the tailgate/trunk lid while removing the drives one at a time
- Release the clip at the end fittings

Step 4:Install Stabilus Replacement Drives

- · Install the Stabilus replacement drives
- Link the cables from the Stabilus drive to the counterpart connector
- Make sure you put the left hand drive on the left side and the right hand one on the right side

Step 5:Insert the Grommet

- Ensure proper insertion of the grommet into the vehicle
- Use a drop of dish soap to ease installation
- Confirm the grommet length is correct
- Prevent contact of the grommet to the bodywork (excep for cable routing) or placing the grommet under tension during this process
- If necessary, readjust

Step 6:Set up control unit

After reassembling the panel:

- · Close tailgate manually, until lock is engaged
- Open and close the hatch automatically (learning run)

Caution: Be mindful of the Push-To-Run function in some electric tailgate systems; moving the tailgate too quickly during setup can cause complications.

Step 7:Set Desired Hatch Position

- · Manually open the hatch to the desired position
- Program the drive accordingly by pressing and holding the closing button on the hatch until a signal is received.
- Make sure the tailgate only opens to the programmed position now, by closing and opening the tailgate automatically again
